Military Status : Completed

## Profile

Computer Science graduate from Fayoum University specializing in Backend Development using Java and Spring Boot. Strong experience in building scalable RESTful APIs, Spring Security, JWT, and working with MySQL and JPA/Hibernate. Solid understanding of OOP, data structures, and clean architecture. Also experienced in Flutter development with exposure to full software development lifecycle. Passionate about building efficient and maintainable applications.

## Education

|                                                                                |                          |                          |
|--------------------------------------------------------------------------------|--------------------------|--------------------------|
| <b>Bachelor of Computer Science</b>                                            | <b>Fayoum University</b> | <b>09/2020 - 07/2024</b> |
| • Major in Computer Science - Faculty of Computers and Artificial Intelligence |                          | GPA: 3.3 (Very Good)     |

## Experience

|                                                                                                                                                                                                        |                                 |                     |                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|---------------------|-------------------------|
| <b>Flutter Developer</b>                                                                                                                                                                               | <b><a href="#">DROPIDEA</a></b> | <b>UAE (Remote)</b> | <b>12/2023 – 1/2025</b> |
| • Developed Wi-Fi Card, a financial app for transferring money and balances, improving performance and UI in subsequent versions. Built Wi-Fi Card app for money and balance transfer between networks |                                 |                     |                         |
| • Enhanced Alwasit AlTabi, a healthcare app with chat features and payment gateway integration. Implemented features like chat systems and payment integrations.                                       |                                 |                     |                         |
| <b>Mobile Application Intern</b><br><b>ITI   Summer 2023</b>                                                                                                                                           |                                 |                     |                         |
| • completed the Study of Flutter & Dart Intern approved by ITI Summer 2023                                                                                                                             |                                 |                     |                         |
| • I gained hands-on experience with Dart, Flutter, and Firebase for building mobile applications. I also developed a solid foundation in web technologies, including HTML, CSS, and JavaScript.        |                                 |                     |                         |

## Skills

- **Programming Languages:** Java | C++ | Python | Dart
- **Backend Development:** Spring Boot | Spring Security | JWT | REST APIs | Spring MVC | Spring Data JPA | Hibernate
- **Database:** MySQL | Firebase
- **Tools & Technologies:** Git | GitHub | Postman | Docker (Basics)
- **Architecture & Concepts:** OOP | Data Structures & Algorithms | Clean Architecture | SOLID Principles

## Projects

### Backend Spring: -

- **E-Commerce Backend API | Java Spring Boot:**
  - Developed a full E-Commerce backend using Spring Boot and MySQL. Implemented JWT authentication & role-based authorization with Spring Security. Built RESTful APIs for users, products, categories, and orders. [GitHub](#)
- **Banking System Backend API | Java Spring Boot:**
  - Developed a secure Banking System backend using Java Spring Boot, Spring Security, JWT Authentication, and MySQL. Implemented account management features including account creation and account retrieval. Built transaction services for money transfer, deposit, withdrawal, and transaction history tracking. [GitHub](#)

### Flutter: -

- **Shakhsni App:** Developed Application using Flutter An application that makes it easy for the patient to book an appointment with any doctor in all specialties. There is also a pharmacy and other things [LinkedIn](#)
- **News Application:** Designed and developed Mobile Application using Flutter and APIs For daily news
- **Wi-Fi Card App :** I am the one who designed this application, a Firebase user for chat, an API user, a bloc , a clean code. The code for this application will be available on Google Play soon.
- **Cairo Souk:** Designed and developed Mobile Application using Flutter,Dio,APIS For displaying and marketing products [GitHub](#)
- **Alwasit AlTabi :** which consists of 3 applications, one for delivery, user, and pharmacy. I modified some points in it, such as adding chat and some payment gateways. . This application will soon be available on the Google Play.

## Certifications

- **Mobile Application Intern ITI** Certificate (2022)
- **Spring Boot REST APIs Certification – Udemy** (2025)
